## EQUIPMENT

---

### *OHP 6000 On Hold MP3 Player*

- **USB connection**  
Connect to your PC via USB to add new content or update firmware.
- **PC connection...strictly optional**  
Unit uses PC only to update content stored in flash memory. Updated content can optionally be added by copying an MP3 or WMA audio file to a SD Card without the unit ever being connected to a PC or network.
- **Auto start after power loss**  
Retains stored preferences such as: music selection, repeat mode and volume settings. If power to the unit is lost, unit immediately returns to continuous playback with all settings without human intervention.
- **LCD Control Panel**  
6 line backlit LCD panel displays ID-3 tags with descriptive names of tracks for easy identification and selection. Display also shows a variety of important information so user can choose playback preferences and easily determine unit's operational status.
- **Flash memory**  
64MB of on-board flash memory stores over 228 minutes of awesome sounding content.
- **Simple, plug-in installation**  
Easily connects to any "music-on-hold ready" PBX or KEY system.

\$255
